Office Action Summary	Application No. 10/621,174	Applicant(s) BREEDEN ET AL.	
	Examiner Carl S. Miller	Art Unit 3747	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1-45 are rejected under 35 U.S.C. 103(a) as being unpatentable over Breeden ('625) in view of French.

Breeden teaches all of the limitations of applicant's claims except the details of the closed-ended spool valve. The Breeden valve, of course, functions the same of applicant's pressure-balanced valve in that the position of the valve is only dependent upon the spring pressure and the control pressure. The housing of the valve supplies the closed portion missing from the valve itself and acts to isolate the valve from the fluid flow pressure by having this pressure create no net movement of the valve.

French teaches a valve (19), which essentially has two closed ends - even though one end moves relative to the other. The position of the valve however is only dependent upon the pilot pressure and the spring pressure balance.

It would have been obvious to use a closed-ended spool in Breeden to achieve the required fluid flow balance because French suggests that a closed-ended spool could be used to avoid the effects of pressure from the regulated fluid.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
